# Peplink Makes Connectivity Reliable

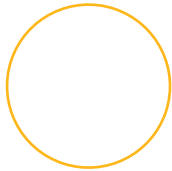

# About Peplink

## Cutting-edge provider of wired and wireless SD-WAN

Peplink makes connectivity reliable. Peplink's ecosystem, SpeedFusion technology and SD-WAN routers have been deployed around the world, helping thousands of customers from many industries increase bandwidth, enhance Internet reliability, reduce connectivity cost, or enable new deployment possibilities.

**Connectivity Reliable**

# Challenges in Hospitality Connectivity

VIEW

## Rising Bandwidth Costs

With the rising popularity of bandwidth hungry apps such as streaming services, hotel operators often struggle to keep up with the bandwidth demand of their guests.

## Limited Landline Access

For secluded vacation spots without access to landlines, providing reliable and fast internet to guests often proves to be a challenge.

VIEW

## Simple Network Management

---

Use InControl to monitor your network and manage your devices from a single pane of glass. Save time and energy by applying bulk configurations, apply schedules to Wi-Fi, VLAN, PoE ports, firmware updates and more.

## Guest-Ready Wi-Fi

---

Provide guests with a fully-customized branded Wi-Fi experience. Deliver advertisements and surveys before guests login with email or social media credentials. Apply built-in, self-updating web blocking lists for peace of mind.

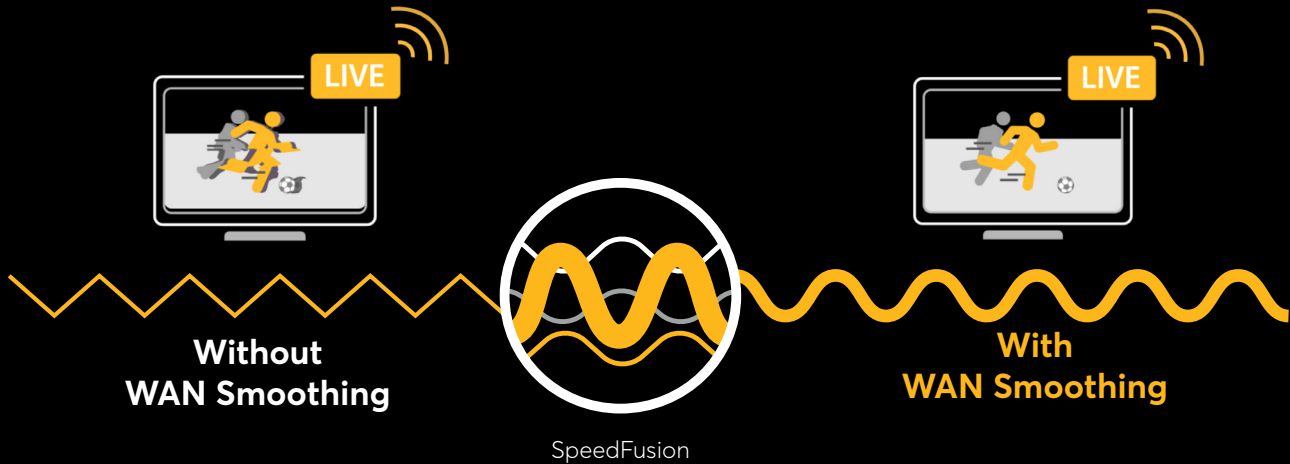

## Reliable Cloud Apps

Build unbreakable SpeedFusion connections to your cloud-based PBX, ERP, and streaming applications by installing FusionHub on the server end.

# SpeedFusion

[VIEW](#) WAN Smoothing

## Smooth Streaming

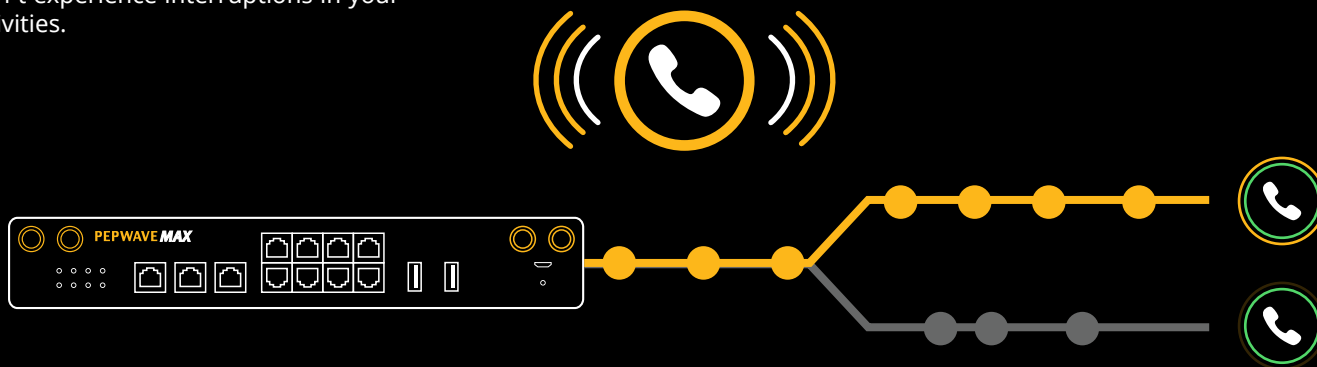

WAN Smoothing utilizes intelligent algorithms to fill in connectivity gaps, trading bandwidth for greater connection resiliency. WAN Smoothing minimizes latency and reduces the impact of packet loss.

## Always Works

In the event of a WAN disconnection, Hot Failover will transfer your traffic to another connection while maintaining session persistence. This seamless transition means that you won't experience interruptions in your activities.
